

# SL1400i Encrypted iPhone

HOMELAND SECURITY STRATEGIES GB LTD

**How do you keep wireless communications private?  
Encryption. Secure Line™ Voice Encryption.  
Introducing the Encrypted iPhone SL1400i**

The Encrypted iPhone is the latest in the Secure Line™ series of point to point voice security. Unlike an APP available from consumer iTunes, the phone comes with actual software installed to operate with the iPhone firmware in order to defeat cellular eavesdropping.

### Privacy

Created to satisfy the needs of high level users, the encryption uses the strongest standards to protect the user from those who seek to hear what is said in confidence.

### Point to Point Security

These encryption protocols afford you the security needed to defend your information at the highest level.

These encryption keys are randomly generated, and communication is not able to be made until

their point to point electronic hand-shake is completed.

**In addition, the unlock Key constantly changes, making secure communication possible only between 2 or more SL1400i series iPhones.**
